SESSION Session 2: Performance evaluation

TYPE Presentation

ABSTRACT

According to the guidelines of the ILRS Pilot Project on Systematic Errors a reprocessing has been carried out at BKG. Besides the time span of 2005-2008 required by ILRS the whole reprocessing covers the years 2000-2012 yielding LAGEOS-only solutions of weekly station positions and Range Biases as well as daily Earth Rotation Parameters. The time series of the parameters obtained are presented and their quality evaluated. Additionally, alternative solutions are produced and compared to the standard solution of the pilot project
