SESSION Session 4: Automation and autonomous station operations

TYPE Poster

ABSTRACT

At GFZ SLR station in Potsdam various hard- and software upgrades have been carried out in the recent months, some of which will also be implemented at the FGI SLR station in Metsähovi. The main goal of these activities is to increase the automation level of the station which will also enable remote and autonomous operation in the near future. We give an overview about the upgrades and the results from first remote operation tests.
