Parameters of new version of Lunar Ephemeris EPM2015 at the base of

Using new version of Lunar ephemeris EPM2015 LLR observations during 2013-2016 were added and new parameters of Lunar ephemeris were obtained. The result of these calculations and analysis of the results are presented. The RMS for total stations on the base of 21490 included. LLR observations is 1.675. The questions of accuracy of LLR (normal points) at different stations and different formats are considered.
