Current status of the new Metsähovi kHz SLR system

We present the current status of the new 2 kHz SLR system at the Metsähovi GGOS core site in Southern Finland. We expect the system to come online in 2017. In addition, we describe the possibilities we see for the development of the system beyond the configuration for normal SLR operations. We will also briefly describe Metsähovi site in general with special emphasis on the ongoing Metsähovi VGOS project.
