The Current Status of Chinese Satellites Observation in ILRS List of Tracking Mission and Future Development

In the current list of ILRS tracking mission there are eleven Chinese satellites observed, nine compass satellites for Beidou navigation and one oceanic environmental monitoring satellite and one nano-satellite for atmospheric density detection. The providers of CPF files and the user of laser data of those satellites are different because of belonging to different departments. This presentation will give the status of satellites observation, the effectivity of utilization of laser data and some mission requirements and future development.
