

# ILRS ASC Meeting Summary

- Review of operational product status from all AC/CC
  - Two of the ACs will return to operations by mid-November
- ASI CC reported on the contributions to the ITRF2014P evaluation and pointed out issues in PSD implementation
- ASI and JCET CCs delivered combinations of the 2005-2008 Systematic Error PP submissions and although there is good agreement between ACs in the derived systematics, the stability of the weekly estimates is nowhere near what is required to derive robust estimates that can reveal issues at the few mm level
- Future plans and Pilot Projects for the near future:
  - implementation of ITRF2014 by early 2017
  - low-degree spherical harmonic estimation and the incorporation of LARES in the operational products
  - observational-level modeling of loading corrections
